

A beautiful blue marble has been entrusted to humanity

We have been asked to govern this marvel responsibly¹ and to keep it for our children

as careful stewards of its changes, and by not losing our marbles of trust, hope, love, and logic.

We need those to check if our governing models, rules, data, and machines for sustainability are as *gentle kind reasonable* as necessary to guard that marble through *humane equal dignity* from Armageddon.

Avoiding Armageddon requires escaping datageddon through Work-Logic Cascades² that ease balancing the main task of keeping everybody's main task their main task, and develop the mental wealth of all via Zoning Investigating Organizing Navigating.³

1. To respond anytime without fear or favor to anybody (to our children's generations, to the past, to others near & far, to the future, to God, to guarding humane equal dignity across space & time), and not fearing any blamer.
2. In WoLCs: *Logics* preserve what we *Care* for; *Care* governs what we *Hope* for; *Hope* governs what we *Trust* is worth working for; *Trust* governs how we use *Info* on *Tech*. All cascading levels end by affecting *Tech* > *Life* > *Space*.
3. Respective WoLCs to be defined and implemented in a unique proposal: a 2cent mustardshield to resist Armageddon with 1600 stadia for wide interdisciplinary diversity_encouraging \wid-e research on how to best follow Reality. See balospe.org
