

Don't be evil. Drop fakes. Defend truth, no fear, nor favor, rich or poor. – Help the weak, don't weaponize interest, support competitors. – Bless enemies. Love your biggest enemy, the Truth. – Don't give too little, nor too much. MMTP: Measure min, Measure max, Tackle tests, Prepare cut. – Do justice, love mercy, walk humbly in light of Reality. – Define an ecosystem of internal formal sub-org-types to evolve the whole, limit damage, debug structures. – Be known as gentle kind reasonable.

# LLCCs for Life

## Evolve a Standard **Limited Liability Charitable Company** Mission

**11. Stadion: STb11-LCC**  
in the 1600 Stadia Talent Vision

### Vision

**Limited Liability Charitable Company** \LLCC standards separate concerns of scales & risks: to grow mental wealth for the Jubilee platform by better self-stabilizing innovation risk-taking.

Each person's **talent-risking-work** power stays linked to their **royal-prophetic-priestly** service responsibility and rewards in the Jubilee-cycle.

A *gentle kind reasonable* **logic** transparently guards **humane equal dignity** by a split of **BasicMoney for living**, protected from all risky **ExtraMoney for investing improving indulging**.

Money-walls **care** to **separate** global **concerns: dignity** for all: offers Jubilee-grade services to scale BasicMoney efficiently across economies to grow Tree of Life-giving decision-making; **success** risks: personal ExtraMoney for vision quest research andOr care luxury fun sharing.

**Scale up** *wid-e* **research** Stadia Talent in stages to tame the datageddon of **corporation structures** that echo greed slavery, indirectly forced labor bias, and grinding BABL<sup>1</sup> millstones of oversimplified overcomplicated overreach from the Tree of Knowledge-faking. **Start a WisdomCONScienceINSpiration LLC** for all Stadia with **max flexibility, min overhead**, and a charter to evolve it in stages into a well-defined **Limited Liability Charitable Company** \LLCC add-on **standard**: for transparent *gentle kind reasonable* servant leadership, distributed work-logic cascades, responsibly sharing 50% of revenue, ethics, *wid-e* **Knowledge Pipeline Refinery** \KPR, conditional counting of quality, pay, Modeling Quality Guidelines, 7ChangeStages of stable innovation, recycling, evolving humane sub-orgs-structures, developing the mental wealth of all, bioreasoning, logics, bias, tools, data, freedom to research, learn, meet, rest, start, work-life-research-service-edu-fun balance, culture, conflict, contracts...

Laurence Loewe of Laodicea \LLOL

$\frac{1}{8}$  of 2 cent shield in 2022

Aims **Root Coordinator: Ergodic CEO reaching for the Bottom** to integrate ZION by ending slavery and indirectly forced labor

Contribution in ArtCard Year

1. **BABL** \Blindly Assuming Blindly Leveraging; a natural way to self-organize that will ultimately cause Armageddon if allowed to continue. see my 1st-vision intro on how to stop it. – 2. **Talent Stadia for biouncertainty** research may avert Armageddon by growing abstract pipelines for **KPR, Knowledge-Pipeline-based Research**. These *wid-e interdisciplinary diversity-encouraging* \wid-e research *mission-vision-oriented expert Knowledge Uncertainty Feedback Pipeline Integration* Research groups mix experts and non-experts with suitable knowledge differentials: The relative experts explain a subject to non-experts (i.e. Knowledge transfer), while misunderstandings & discussion etc. transfer *Uncertainty Feedback* back to the experts, who can use it to refine symbols, etc. This unusual mode of learning is most useful, when all parties are keen to learn and the learning involves new problems in somewhat new areas without pre-packaged lessons. Most of the *wid-e* research required to avert Armageddon is of this open-ended heterogeneous problem-oriented type, which frequently draws on deep expertise from diverse disciplines; hence it's name **wid-e**. Most university departments today excel in their chosen area; yet connecting many dots between fields is too cumbersome to try at scale, hence rarely done; *wid-e* questions are either seen as "too trivial" or "too hard" (for lack of time to read up on that area). It's hard to guesstimate the datageddon bioreasoning efforts for building data-gardens to avert Armageddon, but in-depth bioreasoning (for Evolvix; see "FlyClockbase") may suggest a need for more than ~1600 Talent Stadia, each with ~25,000 *wid-e* researchers focussing "everything on" "problem X". Questions abound, hence 5-12 scaling stages. Yet, it's already clear high-quality bioreasoning needs 2 feet in the mud and a head in the sky: Mud to see the real problems; sky for clear theory on tools & methods. To see FlyClockbase biouncertainty, scale by bioreasoning needs & public (mis-)use of pandemic data, it's clear all on Earth need courses to help all help the stadia, lest AI Armageddon gets us all first. So, a good LLCC is crucial.

Naming rule: **xly** defines label **y** as a perfect synonym of label **x** such that both become a way2say the same [refer to 1 meaning, link identical content, bind 1 item] from different contexts, for diverse aspect revealing uses.
