

A Info-Jungle flows in any direction

Lack of site types, chaotic reasoning, and wild formatting makes fact-checking slow, costly, & error-prone – like searching a swampy labyrinth.

B ReRaft types can organize info-flow

Imagine ... websites declare the type of info-place they want to be, link to sources, and assist users who test their conclusions. How much info-noise would simply vanish?

C Alternative logic is easily included

No need for universal agreement if another logic can be justified: new PoRs can argue new views; yet quality is to be tested with a system that rewards: add quality, cut bugs!

D Distributed work can be batched

Imagine ... cut global data quality costs for testing and reasoning by efficiently batching declared types that are easy to check if in doubt. A few sites

competing in transparent ways for quality will cover their scope better at less cost than myriad mediocre pieces – liberating research time for new questions!
